1. **Even or Odd Function**
    - Write a function is_even(n) that returns "Even" if the number is even, otherwise "Odd".
2. **Largest of Two Numbers**
    - Write a function largest(a, b) that returns the larger number.
3. **Print Numbers**
    - Write a function print_numbers(n) that prints numbers from 1 to n using a loop.
4. **Sum of Numbers**
    - Write a function sum_n(n) that returns the sum of numbers from 1 to n.
5. **Multiplication Table**
    - Write a function table(n) that prints the multiplication table of n from 1 to 10.
6. **Count Even Numbers**
    - Write a function that takes a list and returns how many even numbers it contains.
    - Example:

count_even([1, 2, 3, 4, 6])

Output:3

7. **Find Maximum**
    - Without using max(), write a function that returns the largest number in a list.

11. **FizzBuzz**

- Write a function that prints numbers from 1 to 100.
- If divisible by 3, print "Fizz".
- If divisible by 5, print "Buzz".
- If divisible by both, print "FizzBuzz".

12. **Palindrome Checker**

- Write a function that returns True if a string is a palindrome.

13. **Count Vowels**

- Write a function that counts the vowels in a string.

14. **Second Largest Number**

- Write a function that returns the second largest number in a list without using sort().

15. **Guessing Game**

- Generate a random number between 1 and 10.
- Keep asking the user to guess until they get it right.
- Use a loop, conditionals, and functions.

Write a function grade(marks) that:

- Returns "A" for marks ≥ 90
- Returns "B" for marks ≥ 80
- Returns "C" for marks ≥ 70
- Returns "D" for marks ≥ 60
- Otherwise returns "F"
