1. Write a Python program to check whether a number is **even or odd**.
2. Write a program to find the **largest of three numbers**.
3. Write a program to check whether a given number is **prime**.
4. Write a program to print the **Fibonacci series** up to n terms.
5. Write a program to find the **factorial of a number** using a loop.
6. Write a program to **reverse a string** without using `[::-1]`.
7. Write a program to check whether a string is a **palindrome**.
8. Write a program to count the **number of vowels and consonants** in a string.
9. Write a program to find the **sum of all elements in a list**.
10. Write a program to find the **largest and smallest element in a list** without using `max()` or `min()`.
11. Write a program to **remove duplicate elements** from a list.
12. Write a program to count how many times each element appears in a list using a **dictionary**.
13. Write a program to find the **second-largest number** in a list.
14. Write a program to sort a list **without using `sort()` or `sorted()`**.
15. Write a function that accepts a list of numbers and returns a list containing only the **even numbers**.
16. Write a program to find the **frequency of each character** in a string.
17. Write a program to check whether two strings are **anagrams** of each other.
18. Write a program to find all **duplicate values** in a list.
19. Write a program that takes a sentence and finds the **longest word**.
20. Create a simple **student marks program** that:
    a. accepts marks for 5 subjects,
    b. calculates the total and percentage,
    c. assigns a grade,and displays whether the student passed or failed.
